Prelert Partners With Turnberry Solutions to Deliver Its Big Data Analytics for IT Operations and Security

FRAMINGHAM, Mass. — **Jan. 13, 2014** — Prelert, the first vendor to package data science into downloadable applications for everyday users, today announced it has partnered with Turnberry Solutions, an IT consulting and professional services firm. Turnberry will offer Prelert's Anomaly Detective 3.0 for Splunk Enterprise environments to customers throughout the mid-Atlantic and Northeast regions. Anomaly Detective uses unsupervised machine learning to locate problematic behavior changes hidden in huge volumes of operations data that indicate underlying issues or security threats.

"What impresses me about Prelert's Anomaly Detective is its ability to automatically find anomalous behavior in machine data by relying on trends in the data itself instead of hard-coding rules," said Peter Davis, Co-founder and CTO at Turnberry Solutions. "In addition, Prelert makes it simple to investigate the details gathered to quickly uncover the root cause of the potential issue."

"Turnberry Solutions' customers are looking to stay on top of their Splunk data and ensure thoroughness with locating errors which could indicate a security problem," said Karl Renneker, manager, channel development, at Prelert. "Turnberry offers extensive experience in numerous vertical markets, such as telecommunications, financial services and insurance, along with a track record of implementing solutions that help customers attain operational optimization, stability and security."

Anomaly Detective is easily downloadable software that installs in minutes as a tightly integrated application for Splunk Enterprise. Anomaly Detective is 100 percent self-learning and requires minimal configuration. It identifies developing issues and provides detailed diagnostic data that enables IT experts to avoid problems or diagnose them as much as 90 percent faster than previously possible.
